Dear panda specially gridka family,

Recently I have got gridka account, of course I want to use it effectively.

Now I'm testing analysis scripts with tdr11 data (psi3770=r202).

In attachment, I put my trial jdl, macro code, bin.sh scripts
and a validation code.

I tried already submitting with 10 subjobs, but I couldn't find output error message in my output
directory.

Quote:

```
[pgdb2.gla.ac.uk:3307] /panda/user/d/dkang/ > masterJob 1168153 -printsites
```

```
Jun 17 13:07:35 info Checking the masterjob of 1168153
```

```
Jun 17 13:07:36 info The job 1168153 is in status: DONE
```

It has the following subjobs:

Subjobs in ERROR_V (ikp642.ikp.kfa-juelich.de): 1

Subjobs in ERROR_V (kvit14.KVI.nl): 7

Subjobs in ERROR_V (smigrid02.smi.oeaw.ac.at): 2

In total, there are 10 subjobs

Probably, I made some bug in my submit scripts, or macro code when define the input files and
strings etc...

Could you teach me where I care and fix to do correctly.

Thank you in advance,
Donghee
