Subject: configure csh script

Hi guys,
I would like to point out that the configure.csh in the build folder might have some mistakes. To get configure.csh to work, I had, I had to comment out the first 3 lines
#setenv Linux_Flavour_ "Scientific Linux SL release 5.3 (Boron)"
#setenv System_ "x86_64"
#source /eic/u/raphaelc/fairroot/build/check_system.sh
And remove the if conditional
#if ["$same_system" == "1"]; then
... (leave as is)
#fi

Can anyone else confirm whether or not the script is faulty?
