Dear all,

When building pandaroot using gcc 4.3.X, this class produces the following error:
/pandaroot/hyp/PndHypHit.cxx:65: error: 'abort' was not declared in this scope
This problem can be solved just by adding the line
#include <algorithm>
to PndHypHit.cxx. Unfortunately, I don't have write access to this directory. Can somebody add
this line to that file?

Kind Wishes,
