Hello sir,
I am facing problem to install apr 13 packages on fedora 15 (32 bit) system.
According to Installation file: It not Unpacking glpk-4.39.tar.gz .....
*** ERROR: glpk could not be created.
Here I attached the Install file.
Kindly do in this matter
with thanks

Hi,

I didnt really test this new version of the external packages, but it says in your log file that you do not have the MesaGL libraries installed which are a requirement (see here full list of requirements http://fairroot.gsi.de/?q=node/63). Also the cmake version of your system is older than the one that is required by pandaroot, but that should not be the probleme here I assume. Hope that helps.

Best regards,

Stefan
