Dear Mohammad,

here is one example:

```
simulation/trunk/tpc/PndTpcGas.h: In member function 'double PndTpcGas::VDrift(double, double) const':  
simulation/trunk/tpc/PndTpcGas.h:52: warning: declaration of 'B' shadows a member of 'this'  
simulation/trunk/tpc/PndTpcGas.h:52: warning: declaration of 'E' shadows a member of 'this'
```

Indeed the member variables are prefixed by \_ which is for some reason not recognized when the warning is created. The prefix is a leftover when I ported my work form the older frameworks.

Sebastian.
