Dear Johan,
    for the STT QA macro n.3: the histograms don' t look so bad, I think the problem is that the resolution exceeds slightly the limits I chose to consider the test as passed (perhaps for the low statistics).
I just uploaded to svn a QAmacro_stt_3.C file with more debugging information to be able to understand. If it is due really to the low statistics I will increase a little the number of events in the simulation and see what happens. If the reason is something else I will try to understand. On my machine I don' t see the failure

Cheers,
Lia.
