Hi Lia,

Thanks for looking into it... Let me printout the information I now got from running the macro on a 32-bit machine:

Quote:
TEST 2: helix mu- resolution 0.0248863 (limits [0.025, 0.035])
TEST 6: genfit mu- resolution 0.0176549 (limits [0.018, 0.028])
 Test Failed
 Not Ok
negative muon ptot resolution wrong
negative muon kalman ptot resolution wrong

Looks like that the resolution is even better than the limits you take. If you think that this is OK, I would suggest to put the lower range to smaller values. What do you think?

Greetings,

Johan.
