Thank you Mohammad,
yes, I would try with 100 events.

Sorry, I didn' t take too much care to the timeout value in the CMakeLists.txt : now I set it to 200 sec for macro 2 (which is the slowest) and to 50 for macro 3 (which only fills histo, so it is fast). This should work fine.

I also made some changes to macro 3 to fix some errors in efficiency calculation and to better be able to change the limits (if/when needed).

I hope this will fix the problems!

Cheers,
Lia.
