Hello,

I want to make comments concerning .root files I added
to ../trunk/macro/params/

[particle]_en_th_[TransportModel].root

ONLY the gamma_en_th_TGeant4.root
file is correct (!), done for photons and for GEANT4.

The other 7 files are just copies of that for photons,
to be able to check the code for other cases.
You can decide if it will be needed or not.

In case of YES, the maps for other particles (electron, pion, other, e.g. proton) and GEANT3
should be done.

In case of NO, the fake .root files should be deleted and
the ../trunk/emc/EmcCorr/PndEmcMakeCorr.cxx simplified.

Regards,
Ola.
