hello all,

I have installed pandaroot & set the environment in pandaroot/buildPanda by command .
./config.sh and tried to test EvtGen package

pandaroot/pgenerators/EvtGen
by . configure

when I do make, I am facing following error:

.....

For a listing of replacement headers and interfaces, consult the file backward_warning.h. To
disable this warning use -Wno-deprecated.

/bin/sh: Syntax error: Bad fd number

make: *** [ar] Error 2

.....

so please help me out.
