Hi,

The function "isLibrary" is defined in the "gconfig/rootlogon.C" file. Make sure you call this one first before running the macro:

Quote:gROOT->LoadMacro("\$VMCWORKDIR/gconfig/rootlogon.C");  
rootlogon();

In most of the macros, these lines are included already. Could be that some of the macros do not have this line, although the "basiclibs.C" make a call to "isLibrary" function. Just add them, or run the rootlogon.C before you run the macro.

Greetings,

Johan.
