Subject: Likelihood in PndMvdAdvancedPid Algorithm
Posted by donghee on Wed, 31 Mar 2010 08:21:15 GMT

Hi MVD family!

I have a question about PndMvdAdvancedPidAlgo::CalcLikelihood

Is there some limitation to calculate likelihood with certain hypothesis. I found that upto 2.4 GeV some values of likelihoods can be found, but over 4 GeV all values are 0.2. Is there some reason? what is the meaning of 0.2, is it default value?

Thanks,
Donghee
