Thanks Stepano,

So, first of all I have to update pandaroot.
Then, PndPidCorrelator have to be used to correct my specta.
tutorial/charmonium/* and macro/pid/* should be helpful.
In addition, nice implementation of PndRecoKalman can also be used.
That is now quite clear.

But why do PndLhePidTrack show such kind of strange information, if it is already obsolute in
the pandaroot?
I guess that some hits from both mvd and tpc were not used anymore in this class, or even the
coordinate or some name of hit accessor have been changed internally.

The understanding for the reason is also important to me.
Do you have a rough explanation or simple diagnostic for that?

Thanks.
