Hi

In Draw_geom.C macro

```
TFile* file = new TFile("/d/panda01/carsten/s36.root");
```

In my working directory there is no s36.root file and hence while running draw_geom.C it is giving the following error:

Note: File "/home/manoj/panda/pandaroot/buildPanda/lib/libDrc.so" already loaded

Error in <TFile::TFile>: file /d/panda01/carsten/s36.root does not exist

Error: illegal pointer to class object geoMan 0x0 2423 draw_geom.C:38:

*** Interpreter error recovered ***

what is the contain of the file s36.root and how to generate it?
