Dmitry Morozov wrote on Wed, 05 May 2010 11:07:11) For example I do the following:

```
svn commit media_pnd.geo
```

and got error:

```
svn: Server sent unexpected return value (403 Forbidden) in response to CHECKOUT request for '/fairroot!/svn/ver/8024/pandaroot/trunk/geometry/media_pnd.geo'
```

```
svn: Your commit message was left in a temporary file:
```

```
svn:  '/home/freez/fairsoft/pandaroot/trunk/svn-commit.tmp'
```

Does anybody know what the problem with that?

No idea. Do you have a svn account with the correct write permissions?

2) Another question is how to add new file which is absent in repository (as emc_module5_fsc.root)? If I try to commit it, svn says the file is not under version control.

This is easier.

Before committing the file:

```
svn add emc_module5_fsc.root
```

After, you can commit the file.
