Dmitry Morozov wrote on Wed, 05 May 2010 11:071) For example I do the following: svn commit media\_pnd.geo

and got error:

svn: Server sent unexpected return value (403 Forbidden) in response to CHECKOUT request for '/fairroot/!svn/ver/8024/pandaroot/trunk/geometry/media\_pnd.geo'

svn: Your commit message was left in a temporary file:

svn: '/home/freez/fairsoft/pandaroot/trunk/svn-commit.tmp'

Does anybody know what the problem with that?

No idea. Do you have a svn account with the correct write permissions?

## Quote:

2) Another question is how to add new file which is absent in repository (as emc\_module5\_fsc.root)? If I try to commit it, svn says the file is not under version control.

This is easier.

Before committing the file:

svn add emc\_module5\_fsc.root

After, you can commit the file.
