Subject: Mvd code update
Posted by Ralf Kliemt on Sat, 15 May 2010 21:25:20 GMT

Hello everybody,

tonight I merged the development branch of the mvd, sds and pnddata/Sdsdata packages to the trunk. The following issues are adressed:
- Mvd inherits now from Sds (like all semiconductor detector systems shall do i.e. lumi/lmd and hyp)
- Introduction of time-over-threshold electronics emulation
- shorter (integer) IDs for detector volumes
- several bugfixes & cleanups

I think, since it never ran on any system outside of the mvd developers, it is better not to add it to the next release.

Please give your feedback if something looks odd.

Thanks, Ralf.
