Dear all,

I met the same problem even with case 15. But in addition there is another problem:

```
===== EMC:: ConstructRootGeometry() m4a ===
```

```
=====
```

```
fgeoName3:: /u/dkhanef/programs/trunk/geometry/emc_module4_StraightGeo24.4.root
```

```
File name Bw1= /u/dkhanef/programs/trunk/geometry/emc_module4_StraightGeo24.4.root
```

```
You do not provide a ROOT file
```

Somehow pandaroot isn't able to load backward endcap geometry in case 15 but still can do it in other cases. I checked case 11,12 and 17.

P.S. pandaroot v.8554
