Subject: Re: segmentation fault during digitization (wrong mapper?) Posted by Dmitry Khaneft on Tue, 25 May 2010 12:54:26 GMT View Forum Message <> Reply to Message

Dear all,

I met the same problem even with case 15. But in addition there is another problem:

===== EMC:: ConstructRootGeometry() m4a ===

fgeoName3:: /u/dkhaneft/programs/trunk/geometry/emc_module4_StraightGeo24.4.root File name Bw1= /u/dkhaneft/programs/trunk/geometry/emc_module4_StraightGeo24.4.root You do not provide a ROOT file

Somehow pandaroot isn't able to load backward endcap geometry in case 15 but still can do it in other cases. I checked case 11,12 and 17.

P.S. pandaroot v.8554
