Subject: Re: radiation legth study or G3 vs G4 Posted by Mohammad Al-Turany on Wed, 23 Jun 2010 15:04:47 GMT View Forum Message <> Reply to Message

Hi Dmitry,

This macro is doing the analysis of the output tree, what I meant was which macro you use to produce the radiation length data. And as you wrote it is the sim macro! but with which generator? To study the radiation length one take a particle or box generator, shot GIANTINO (OR ROOTINO) in the directions he want to study and then analyze the data.

So how did you do it?

Mohammad
