Ralf Kliemt wrote on Thu, 15 July 2010 15:40Hello,

My thoughts on that:

trying to compile DpmEvtGen it has problems with fairsoft/tools/root/lib/libHist.so.

For me it looks like you should check your root installation. If I loo in the code there is no root histogram used in the code.

You even can comment out the #include TH1F in the main.cc.

Try to deactivate pgenerators/DpmEvtGen in pandaroot/CMakeLists.txt.

What kind of operating system do you use? A MacOSX ? I've to comment the DpmEvtGen on my mac, too.

I guess that because of the fortran code, isnt it?

Same problem in EvtGen...
