Subject: Re: Out of memory problem in EmcPoint - FairLink ?
Posted by Dima Melnychuk on Fri, 06 Aug 2010 12:57:41 GMT

Hi Stefano,

I tried to do something with PndEmcStructure, by adding at the end of
PndEmcStructure::crystal_name_analysis()

delete subStrL;

where
TObjArray *subStrL =
TPRegexp("^cave/Fsc_(\\d+)/emc(\\d+)r(\\d+)c(\\d+)_0$").MatchS(node_path);

But it somehow only increased memory consumption and calculation time. So I suspect this
code should be rewriten somehow without regular expressions. But it will take some time and I
can try to do it in two weeks after my vacations.

Best regards,
Dima
