Hi,

the problem is in media_pnd.geo, if you go to version 9909 of the file, the crash disappears.

It was added a line in the definition of the properties of two dirc materials, without changing the number of lines. Not clear to me if the lines should be added or if they should replace something.

The author is "mpatsyuk", but I don't have his/her mail address.

Maybe Jochen could comment?
