I have committed the PndPidCorrelator and updated the code.

At GSI I have the following error in compilation:

```
[ 60%] Building CXX object emc/CMakeFiles/Emc.dir/EmcReco/PndEmcErrorMatrix.o
/d/panda02/spataro/pandaroot/emc/EmcReco/PndEmcErrorMatrix.cxx: In member function
'TMatrixD PndEmcErrorMatrix::GetErrorMatrix(const PndEmcCluster&) const':
/d/panda02/spataro/pandaroot/emc/EmcReco/PndEmcErrorMatrix.cxx:85: error: 'abort' was not
declared in this scope
make[2]: *** [emc/CMakeFiles/Emc.dir/EmcReco/PndEmcErrorMatrix.o] Error 1
make[1]: *** [emc/CMakeFiles/Emc.dir/all] Error 2
```

It seems abort() is not accepted by all the compilers. Would it be possible to return something else? Has someone else the same crash?
