Hi,

yes, I meant run_digi_tpccombi.C. It finished without a crash.

gcc --version is: gcc (GCC) 4.1.2 20061115 (prerelease) (Debian 4.1.1-21)

We will now try to run it on a 64bit machine and see if it crashes there.

EDIT: The macro sucessfully ran on a 64bit machine.

But we discovered many memory leaks that we will have to fix the next days.
