Hello Sergey,

I'm willing to do it, within the next few weeks, since I'm working currently on the impact of nuclear fragments on the inner part of MVD stations.

I've joined some raw specifications of the beam emittance at CBM target for SIS300 from Sebastian Ratschow. I'm intending to use such values, eventually scaled to the magnetic rigidity of Au79+ @10AGeV at SIS100.

Hope it gives you some useful informations.

Best regards, Selim
