Sorry for the late reply. Thursday is "meeting" day

@Jens: I think you mean the MVD geometry? It's the new one:

Mvd-2.1\_AddDisks\_FullVersion. The track efficiency is not that worse. I simulated only 3e3 events for the 100MeV/c and 1e4 events for the 200MeV/c case. I forgot to say that.

@Lia: That was the right hint I think. I have not checked if an error occurred. With the check one can see, that the Kalman failed:

greetings

David
