Subject: Re: Macros for Mvd+Stt Pattern Recognition Posted by StefanoSpataro on Fri, 10 Dec 2010 09:45:16 GMT View Forum Message <> Reply to Message

Hi,

Tobias has changed in some part of the code the way to access to detector ID in the PndTrackCand.

Before, the detId was taken from the enum in PndDetectorList -> kMVDStripPixel.

With the new changes the detector ID is the branch ID of the corresponding TClonesArray, i.e.:

FairRootManager::Instance()->GetBranchId("MVDStripPixel")

As far as I have checked, the code was changed in Ihetrack, pid and recotasks. Probably there is still some unchanged part of the code in Stt and maybe also in other tracking classes.
