Hallo Ralf,

please use an older revision for the moment. I think r10451 should be fine. In the meantime we are working to make the stt code compatible with the new way of getting the detID. It shouldn't take too long.

Cheers,

Lia.

Update: sorry, 10451 is not old enough, it has to be older than 10446. But keep the newest macro/pid macros for stt in order to use the stt + mvd PR!
