Hallo Ralf,
  please use an older revision for the moment. I think r10451 should be fine. In the meantime we are working to make the stt code compatible with the new way of getting the detID. It shouldn' t take too long.
      Cheers,
       Lia.

Update: sorry, 10451 is not old enough, it has to be older than 10446. But keep the newest macro/pid macros for stt in order to use the stt + mvd PR!
