Quote:As I read, this is specific for STT (I need something general)
Yes, this was written for the tubes, but also the other detectors fill the passive/active node list... maybe it could be generalized.

Quote: ... and in your example it seems that you already know that you're looking for a tube. So I wonder if

```
TGeoVolume* rootvol = pnode->getRootVolume();
```

```
TGeoShape* volshape = rootvol->GetShape();
```

would work in your case, giving TGeoTube as shape name?

No, I just tried and it gives me "stt01tube", but InspectShape works and recognizes it as a TGeoTube.

Ciao,
Lia.
