Hi,
 Quote: Maybe Lia could confirm whether the PID information is passed correctly yo GEANE in all places where this is needed in GeaneTrackRep
I checked this directly in FairGeanePro, where the Geant code is given as input to the ertrak, which is the link between the interface and the fortran part, and that part is right: GEANE takes the correct code. So the tracking is done with the correct particle hypothesis.
...more tests are required...
                Lia.
