Dear colleagues,

I have just committed modified version of PndEmc.cxx, which include target pipe hole in the barrel EMC of size 3x3 crystals.

This implementation was proposed by Stefano and I have just modified PndEmcMapper and PndEmcStructure accordingly.

Such a version of the hole does not correspond exactly to the design proposed some time ago by Christine Le Galliard but is just enough space for the target pipe at the barrel EMC radius. So, it can be considered as a preliminary version.

Best regards,

Dima
