Hi all,

with the new external package release (feb11) a new variable is present in GEANE to set the IERR flag printouts to quiet: they are now set to quiet by default, but if you want to switch them on again you just have to set to 0 the NOPRNT variable in Geane.C:

```
fErtrio1->noprnt = 0;
```

This should help in keeping the log files smaller.

Cheers,

Lia.
