Hi all,
   with the new external package release (feb11) a new variable is present in GEANE to set the
IERR flag printouts to quiet: they are now set to quiet by default, but if you want to switch them
on again you just have to set to 0 the NOPRNT variable in Geane.C:
fErtrio1->noprnt = 0;

This should help in keeping the log files smaller.
                        Cheers,
                         Lia.
