Hi all,

Till now in emc reconstruction code the same parameter was used "EmcDigiPositionDepth" for effective shower depth in target EMC and shahshlyk. I introduced in the code the separate parameter for the shahslyk. So in the parameter files /macro/params/emc.par and all.par now there are two independent parameters EmcDigiPositionDepthPWO and EmcDigiPositionDepthShashlyk. Value for EmcDigiPositionDepthShashlyk at the moment is left the same as for PWO and is a matter of future optimization.

Best regards,

Dima
