Hi,
I have seen from the dashboard that reco_complete_tpc.C is crashing in all the machines.
In particular, the error is the following:

[INFO   ] The number of entries in chain is 10
PndTpcClusterFinderTask::Exec
665 cluster created containing 2153 digis from 2153
PndTpcRiemannTrackingTask::Exec; Event Number: 0
PndTpcRiemannTrackingTask: No const field! Curvature seeding not valid... Setting Bz=2T
RiemannTrackingTask number of clusters: 665
