
Subject: Question about geometryversion for EMC

Hi all,

What is different between SetGeometryVersion(15) and (19) at EMC?

In version 15, the file of "emc_module125.dat" is called.
and for 19 case used "emc_module12.dat".

And I'm wondering whether both case(ver.15 and 19) will be put also very forward calorimeter
(Shashlyk-type calorimeter) automatically in the simulation or not.

Thank you for your teaching...
Donghee
