Hi all,

What is different between SetGeometryVersion(15) and (19) at EMC?

In version 15, the file of "emc\_module125.dat" is called.  
and for 19 case used "emc\_module12.dat".

And I'm wondering whether both case(ver.15 and 19) will be put also very forward calorimeter (Shashlyk-type calorimeter) automatically in the simulation or not.

Thank you for your teaching...  
Donghee
