Hi Elisa,
   thank you for the post.
It really seems the problem is the starting momentum z component, so I just uploaded to svn a modified PndSttMvdGemTracking.cxx that should fix the problem.
If the crash is still there, please let me know!
                              Ciao,
                               Lia.
