Subject: Re: Reconstruction macro crash Posted by StefanoSpataro on Mon, 23 May 2011 11:23:13 GMT View Forum Message <> Reply to Message

Hi,

I don't know how the stt+mvd+gem code works, but I an wondering if all the tracks are extrapolated to gem planes or only the "forward ones".

IO mean, I think that if a track has theta > 30° it will have no chance to hit the gem planes. f such a cut is not present n the code, maybe it could be good to put it, pz will be much bigger than 0, thus no problems.

Could it help? Or maybe this is already included in the code?
