Dear all,

I created a new release of pandaroot, named "may11". This release was created from trunk revision 11990, and will be used to start the simulation production for the tracking TDR studies. Furthermore, the "stable" branch has been updated accordingly. The new release can be obtained via svn:

svn co https://subversion.gsi.de/fairroot/pandaroot/release/may11

The installation of this release on all the grid sites (package "pandaroot::may11", which depends on "panda_extern::may11") is now in progress....

Greets,

Johan.
