The proper way to run DIRC geometry is the following:

```
Drc->SetRunCherenkov(kTRUE);  
Drc->SetGeometryFileName("dirc_I0_p0.root");  
fRun->AddModule(Drc);
```

(see trunk/macro/drc/sim_dirc.C)

And those warnings when you run the DIRC simulation with geant3 are harmless, in geant4 they disappear.

Hope this helps.
