Hi,
 I prepared a macro (attached to this message) to test the PR as I said before, so that we can understand if (and where) there is a wrong hitid in a track candidate.

Please, Dima, can you run the macro on your files (changing the file names accordingly to yours) and on the different TCAs of PndTrack which come out from the various pattern recognitions?
At the moment it is set to work for evt_***_stt.root files (digi/reco) and for SttMvdTrack.

I hope this can help finding the problem,
                              Lia.
