Hi Ralf,

sorry for the late reply, I thought I could have a look to the code you sent me this week, but I could not. You know, I am very busy with the STT code... I will try to find some time for GEANE too.

Concerning the mismatch between fortran and fairroot units I would exclude this, since we made several tests (pulls and residuals) and we always got good results, so any mismatch should have shown up also before.

I have a couple of questions: which pdg code are you using to propagate and where are you propagating from in this specific event? What are your starting point and momentum?

Cheers,
Lia.
