Hi Christian,

I made the test on the Genfit flag and I found that only in 2 events (out of 10000) the GF status flag is equal to 1 (failure).

So this should not be the reason of the tails...

Concerning the other failures of Genfit, by looking at the flag implemented by Stefano, I found:

- 46 events with flag = -1 (NDF=0)

- 310 events with flag = -2 (GFTrack to PndTrack conversion failed).

As I told you, these events are rejected and do not enter in the plot.

Do you have any suggestion?

Ciao,

Susanna
