Hi Dima,

Quote:PndTpcGas: Reading data file: NEON-90\_CO2-10\_B2\_PRES1013.asc  
Fatal in <PndTpcGas::PndTpcGas>: Input File is not found

I had the same thing before - has there been some change to the param file recently? Stefano? It was working yesterday, and now the files aren't looked up in the tpc folder anymore, but in the trunk .... This has to be solved! Otherwise we need some links lying in trunk/ ...

Concerning the other crash - this looks still like one of the exceptions we've been seeing in the extrapolations... Are you sure you are running the latest version of GenfitTools/, tpc/tpcreco/, recotasks/ and genfit/ ? What is the version if GeaneTrackRep and RKTrackRep?

If you suspect memory usage - can you check how much the macro is using up?

Cheers

Felix
