Subject: Re: test of submit script at gridka Posted by StefanoSpataro on Wed, 22 Jun 2011 11:51:38 GMT View Forum Message <> Reply to Message

When youa re analysing a collection, the system is copyng the fiels from the collection into some temp directory, therefore you can modify them as you wish.. the original names will persist on the original place.

However, you can use %alien\_counter to propagate such number also itno your analysis macros. If you look at the scripts we are sending you can see how this works... you have onky to use it as input parameter of your analysis macro.
