Dear Alicia,

I add string: add\_subdirectory (ftof)  
to file pandaroot/CMakeLists.txt (copy of trunk from svn) attached,  
then:

```
cd pandaroot/buildPanda
make clean
cmake ../
. ./config.sh
make
```

then I add some lines to pandaroot/tutorials/charmonium/jul10/run\_sim\_tpccombi.C:

```
FairDetector *FTof = new PndFtof("FTOF",kTRUE);
FTof->SetGeometryFileName("ftofwall.root");
fRun->AddModule(FTof);
```

and to pandaroot/tutorials/charmonium/jul10/run\_digi\_tpccombi.C (attached):

```
// ----- FTOF hit producers -----
PndFTofHitProducerIdeal* tofhit = new PndFTofHitProducerIdeal();
tofhit->SetVerbose(iVerbose);
fRun->AddTask(tofhit);
```

then run it:

```
root -b run_sim_tpccombi.C
```

but stil the result is:

```
Processing run_sim_tpccombi.C...
```

```
PSaid instance created... access via gSaid->f()
```

```
[INFO ] Media file used : /u/naryshk/ver1/pandaroot/geometry/media_pnd.geo
