Hi MVD experts,

I am running some tests and I see several crashes in genfit, but after looking at the problem I think that this is caused by the sds covariance matrix, when it happens to have all the elements equal to 0:

-l- PndSdsRecoHit::PndSdsRecoHit: Wrote a hit with
(x,y) = (0.2535,-0.2925).
Covariance Matrix is
2x2 matrix is as follows

```
  | 0 | 1 |  
-----  
0 | 0  0  
1 | 0  0
```

this turns out in the crash

```
#10 0xb2454dd5 in GFTools::invertMatrix (mat=..., inv=...)  
    at /home/lavezzi/test_dev/trunk/genfit/GFTools.cxx:288  
#11 0xb244b438 in GFKalman::chi2Increment (this=0x8ab4208, r=..., H=...,  
    cov=..., V=...) at /home/lavezzi/test_dev/trunk/genfit/GFKalman.cxx:200  
#12 0xb244c4b5 in GFKalman::processHit (this=0x8ab4208, tr=0x12bc0090, ihit=3,  
    irep=0, direction=1)  
    at /home/lavezzi/test_dev/trunk/genfit/GFKalman.cxx:313  
#13 0xb244b27d in GFKalman::fittingPass (this=0x8ab4208, trk=0x12bc0090,  
    direction=1) at /home/lavezzi/test_dev/trunk/genfit/GFKalman.cxx:169  
#14 0xb244aacb in GFKalman::processTrack (this=0x8ab4208, trk=0x12bc0090)  
    at /home/lavezzi/test_dev/trunk/genfit/GFKalman.cxx:77  
#15 0xafb6c461 in PndRecoKalmanFit::Fit (this=0x8ab41d8, tBefore=0xfd188a0,  
    PDG=13)  
    at /home/lavezzi/test_dev/trunk/GenfitTools/recotasks/PndRecoKalmanFit.cxx:282
```

since at that point, in the invertMatrix function, there is $1./mat[0][0]$ and $mat[0][0]$ is equal to 0.
I am using rev 12447.

Could you please fix this? Or is it fixed in the latest revision?

Thank you in advance,
Lia.
